User Manual Document:

🔐 1. Getting Started (Authentication)

1. Navigate to the system URL.
2. Enter your **Email Address** (this is your username) and **Password**.
3. The system will automatically redirect you to your specific dashboard based on your role.

🥼 2. Laboratory Manager Portal

The Manager oversees the entire lab operations, staff, and inventory.

- **Test Catalogue:** Create Categories, Sample Types, and Test Types. You must link consumables to test types here.
- **Stock Management:** Add Consumables, track quantities, and manually adjust stock levels (Increase, Decrease, or Set).
- **Suppliers:** Manage vendor details (name, contact, email).
- **Purchase Orders:** Create orders for low-stock items. When the stock arrives, click **Receive** to automatically update the inventory.
- **Staff Management:**
    - **Add Doctor:** Generates credentials and emails them.
    - **Add Technician:** Generates credentials, emails them, and assigns them specific tests they are allowed to perform.
- **Reports:** Generate PDF reports showing the total tests performed grouped by category within a date range.

👨‍⚕️ 3. Doctor Portal

Doctors interact with patients, submit test requests, and review results.

- **Patients:** Register new patients, view their medical history (conditions, allergies, medications), and view their past test requests.
- **Create Test Request:**
    - Select a patient, choose the urgency (Routine, Urgent, STAT).
    - Select the tests required (e.g., Full Blood Count).

    - Enter the **Barcode(s)** from the physical sample tubes.
    - Submit. The patient is automatically emailed.
- **Results:** View patient results. Abnormal results are highlighted in red. You can **Release** results to the patient via email or request they book an appointment.
- **Alerts:** View a list of all abnormal results from the last 5 days.

🔬 4. Lab Technician Portal *(Coming Next)*

Technicians process the physical samples into digital results.

- **Receive Samples:** Scan the barcode from the Doctor's request to acknowledge the lab has received the sample.
- **Perform Tests:** Select tests assigned to you by the Manager. The system will automatically deduct the necessary consumables from stock.
- **Capture Results:** Enter the numeric result values. The system automatically flags them if they are abnormal.
- **Verification:** A *different* technician must verify the results before the Doctor can see them.

🩺 5. Patient Portal

Patients can view their own health data securely.

- **Dashboard:** View recent test results and overall health summary.
- **Medical History:** Add or update chronic conditions, allergies, and current medications.
- **Consent Management:** Grant or revoke access to your medical history for specific doctors.
- **Trends:** View graphs tracking specific test results (e.g., Cholesterol) over time.

⚙️ 6. Admin Portal

Admins manage the universal dropdown lists used across the system.

- **Categories:** Manage types of lists.
- **Conditions:** Add/Edit medical conditions (e.g., Diabetes, Asthma).

- **Allergies:** Add/Edit allergies (e.g., Penicillin, Peanuts).
- **Medications:** Add/Edit standard medications.

📄 7. General Features (All Roles)

- **My Profile:** Click on your profile in the sidebar to update your Name, Email (Username), and Phone number.
- **Change Password:** Enter your current password, choose a new one (min 8 chars, 1 uppercase, 1 number, 1 special char), and confirm.
- **Mask/Unmask Password:** Click the 👁️ eye icon in any password field to see what you are typing.
- **Security:** Always click the **Sign Out** (logout) icon in the top right corner when leaving the computer.
